SMA Data Archiving and Reduction

Holly Thomas
SMA Advisory Committee
18 July 2018

<https://www.cfa.harvard.edu/rtdc/>

The RTDC

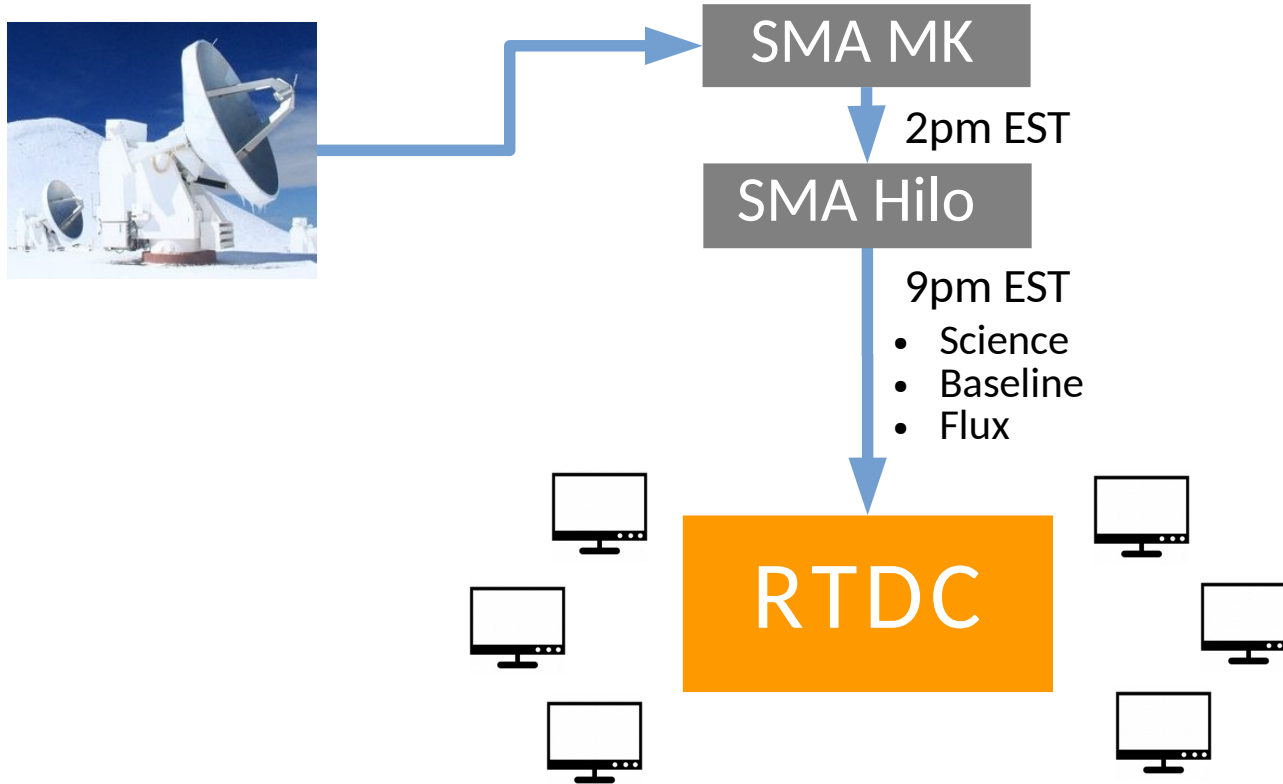

What we do

- Archive data from the SMA, CfA Millimeter-wave Telescope, and Antarctic Submillimeter Telescope & Remote Observatory (AST/RO).
- Supply hardware and software for the reduction of radio interferometric data (ALMA, VLA, VLBI, SMA).

For the SMA

- Store a copy of SMA data archive
- Maintain software required for SMA data processing
- Two web-based archives for external users
- Provide SMA data reduction information

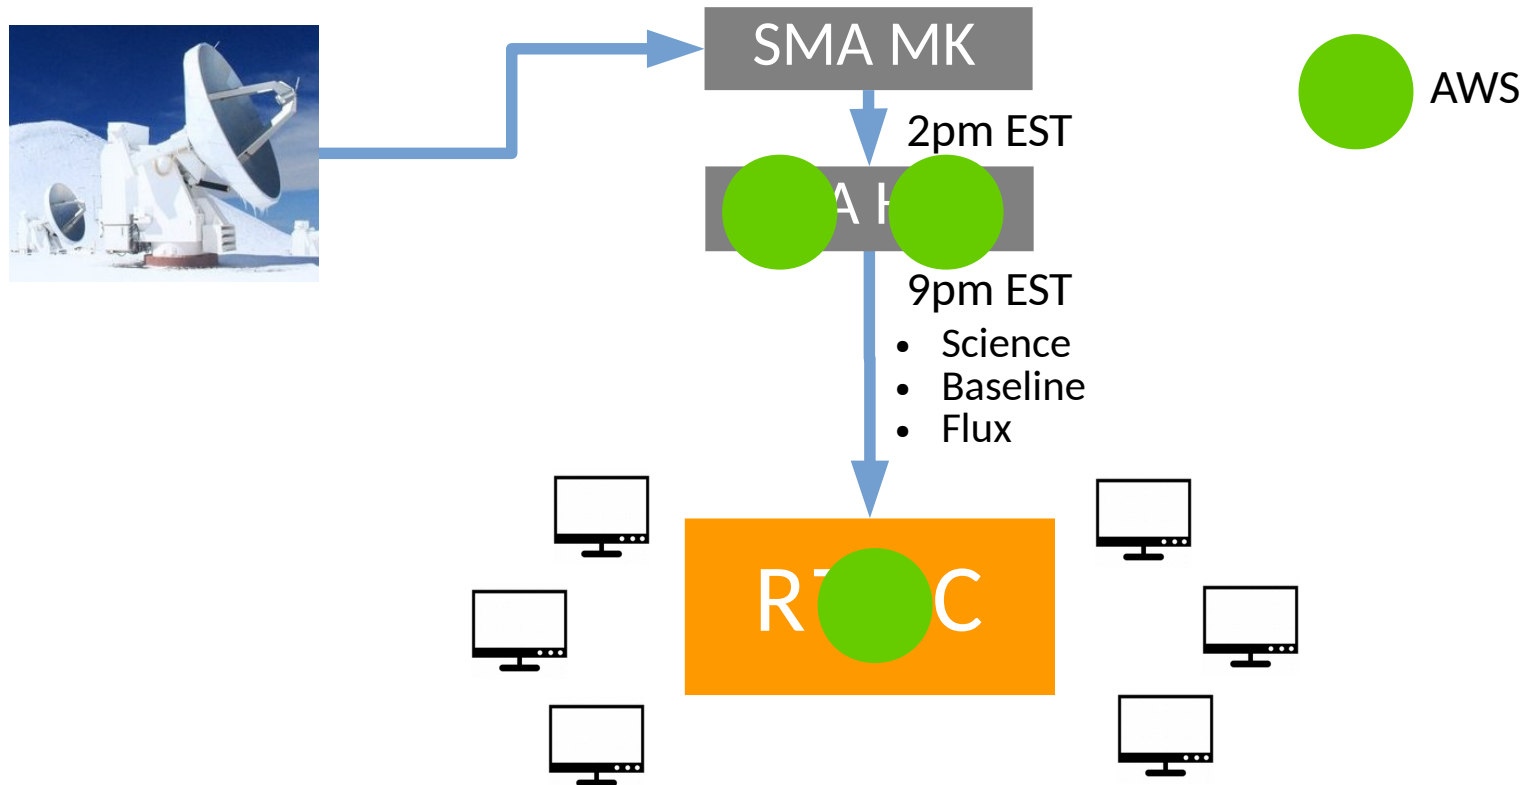

SMA Data Flow

At the RTDC

- All science data
- Past 5 years of flux and baseline data

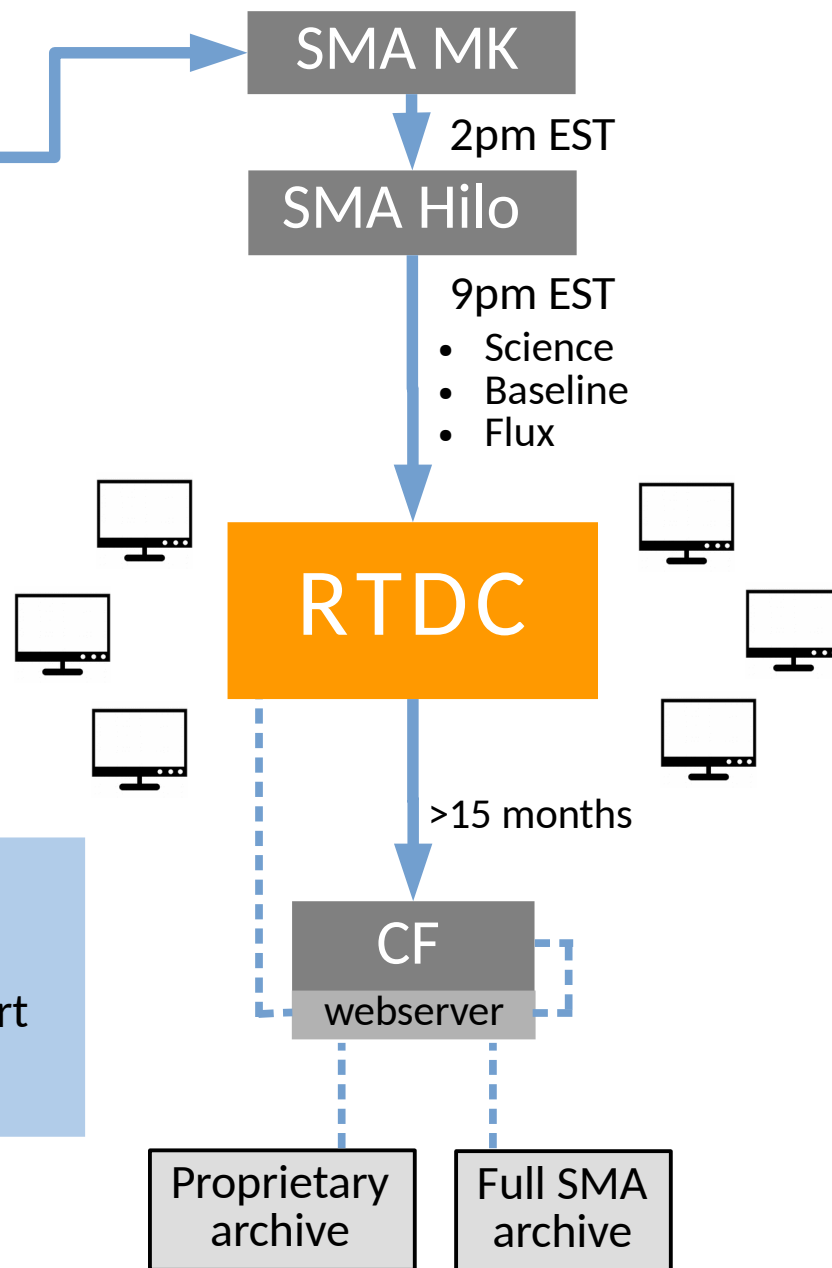

SMA Data Flow

At the RTDC

- All science data
- Past 5 years of flux and baseline data

SMA Data Flow

For the archive

- Tar data
- Generate observing report
- Include antenna file

SMA Archives

Rebin factor:

Linked from SMA Observer Center

SMA Data

SMA Data

- Current size of archive ~ 50 TB
- Feb 2018 - New storage server (160TB)

SMA Data

Cloud benefits

- Won't degrade
- Fully expandable
- Cheaper long-term

Testing AWS for SMA – use TBD

- All data or non-proprietary data only?
- Private (long-term backup) + public (packaged for archive)
- Archive provides link to cloud

SMA Data Reduction

Reduction path

Calibration: MIR

Imaging: CASA (MIRIAD)

Issues with MIR: memory/license

Future

- All reduction in CASA
- More work needed first
- CASA parallelization

Good documentation is key!

The screenshot shows the Radio Telescope Data Center (RTDC) website. The header includes the RTDC logo and navigation links for SAO, R&G, SMA, and a search bar. The main content area is titled "An Introduction to SMA Data Reduction" and is divided into several sections: "Useful links before you start", "Reducing the size of your data", "Calibrating SMA data", "Imaging SMA data", and "Summary". The "Summary" section contains a table comparing the capabilities of different software packages for SMA data reduction.

	MIR/IDL	MIRIAD	CASA	AIPS
Calibration	✓	✓	✓	✗
Imaging	✗	✓‡	✓‡	✓
Can read raw SMA data	✓	✓*	†	✗
Well supported	✓	✗	✓	✗

‡ SWARM data only
* ASIC data only
† Not fully supported

MIR, MIRIAD and CASA are all available from the RTDC, CF and Hilo machines. AIPS is available from the RTDC only.

Science Pipeline

Goals

- Provide PIs with calibrated datasets
- Build processed data archive
- Non-proprietary data → calibrated + quicklook image

Testing the Options

- MIR calibration scripts
- Robust SMA → CASA conversion – CASA calibration script
- “In-house” calibration pipeline

Summary

To Date

- More useful webpages
- More functional archive
- Responding to storage requirements
- Exploring pipeline options

The Future

- Supply PIs with calibrated (imaged) data
- More integration between RTDC, SMA, and cloud services
- Clear documentation for users
