The first (and only) galactic detection of the 183 GHz water maser with an interferometer: The curious case of Serpens SMM1

Tim van Kempen\textsuperscript{1,2}, David Wilner\textsuperscript{2} & Mark Gurwell\textsuperscript{2} \textsuperscript{1}\text{Leiden Observatory, }\textsuperscript{2}\text{CfA}

The 183 GHz water maser has the lowest energy level & most easily excited one
Maser perhaps associated with second protostar
Still only detected 183 GHz water in the Milky Way with an interferometer

(ALMA Band 5 is years away)
