Why Is Astronomy Interesting?

- Astronomy has always been data-driven....
Now becoming more accepted in other areas as well
- ▶ Important spatio-temporal features
 - ▶ Very large density contrasts in populations
 - ▶ Real errors and covariances
 - ▶ Many signals very subtle, buried in systematics
 - ▶ Data sets large, pushing scalability
 - LSST will be 100PB

“Exciting, since it is worthless!”

SLOAN DIGITAL SKY SURVEY
SkyServer DR14

Data Release 14

NEW: SkyServer now contains data from the new SDSS Data Release 14! For more information, see the [DR14 documentation on the SDSS website](#).

Welcome to the DR14 site!!!

This website presents data from the Sloan Digital Sky Survey, a project to make a map of a large part of the universe. We would like to show you the beauty of the universe, and share with you our excitement as we build the largest map in the history of the world.

PHYSICAL PROPERTIES OF LARGE-SCALE GALACTIC FILAMENTS

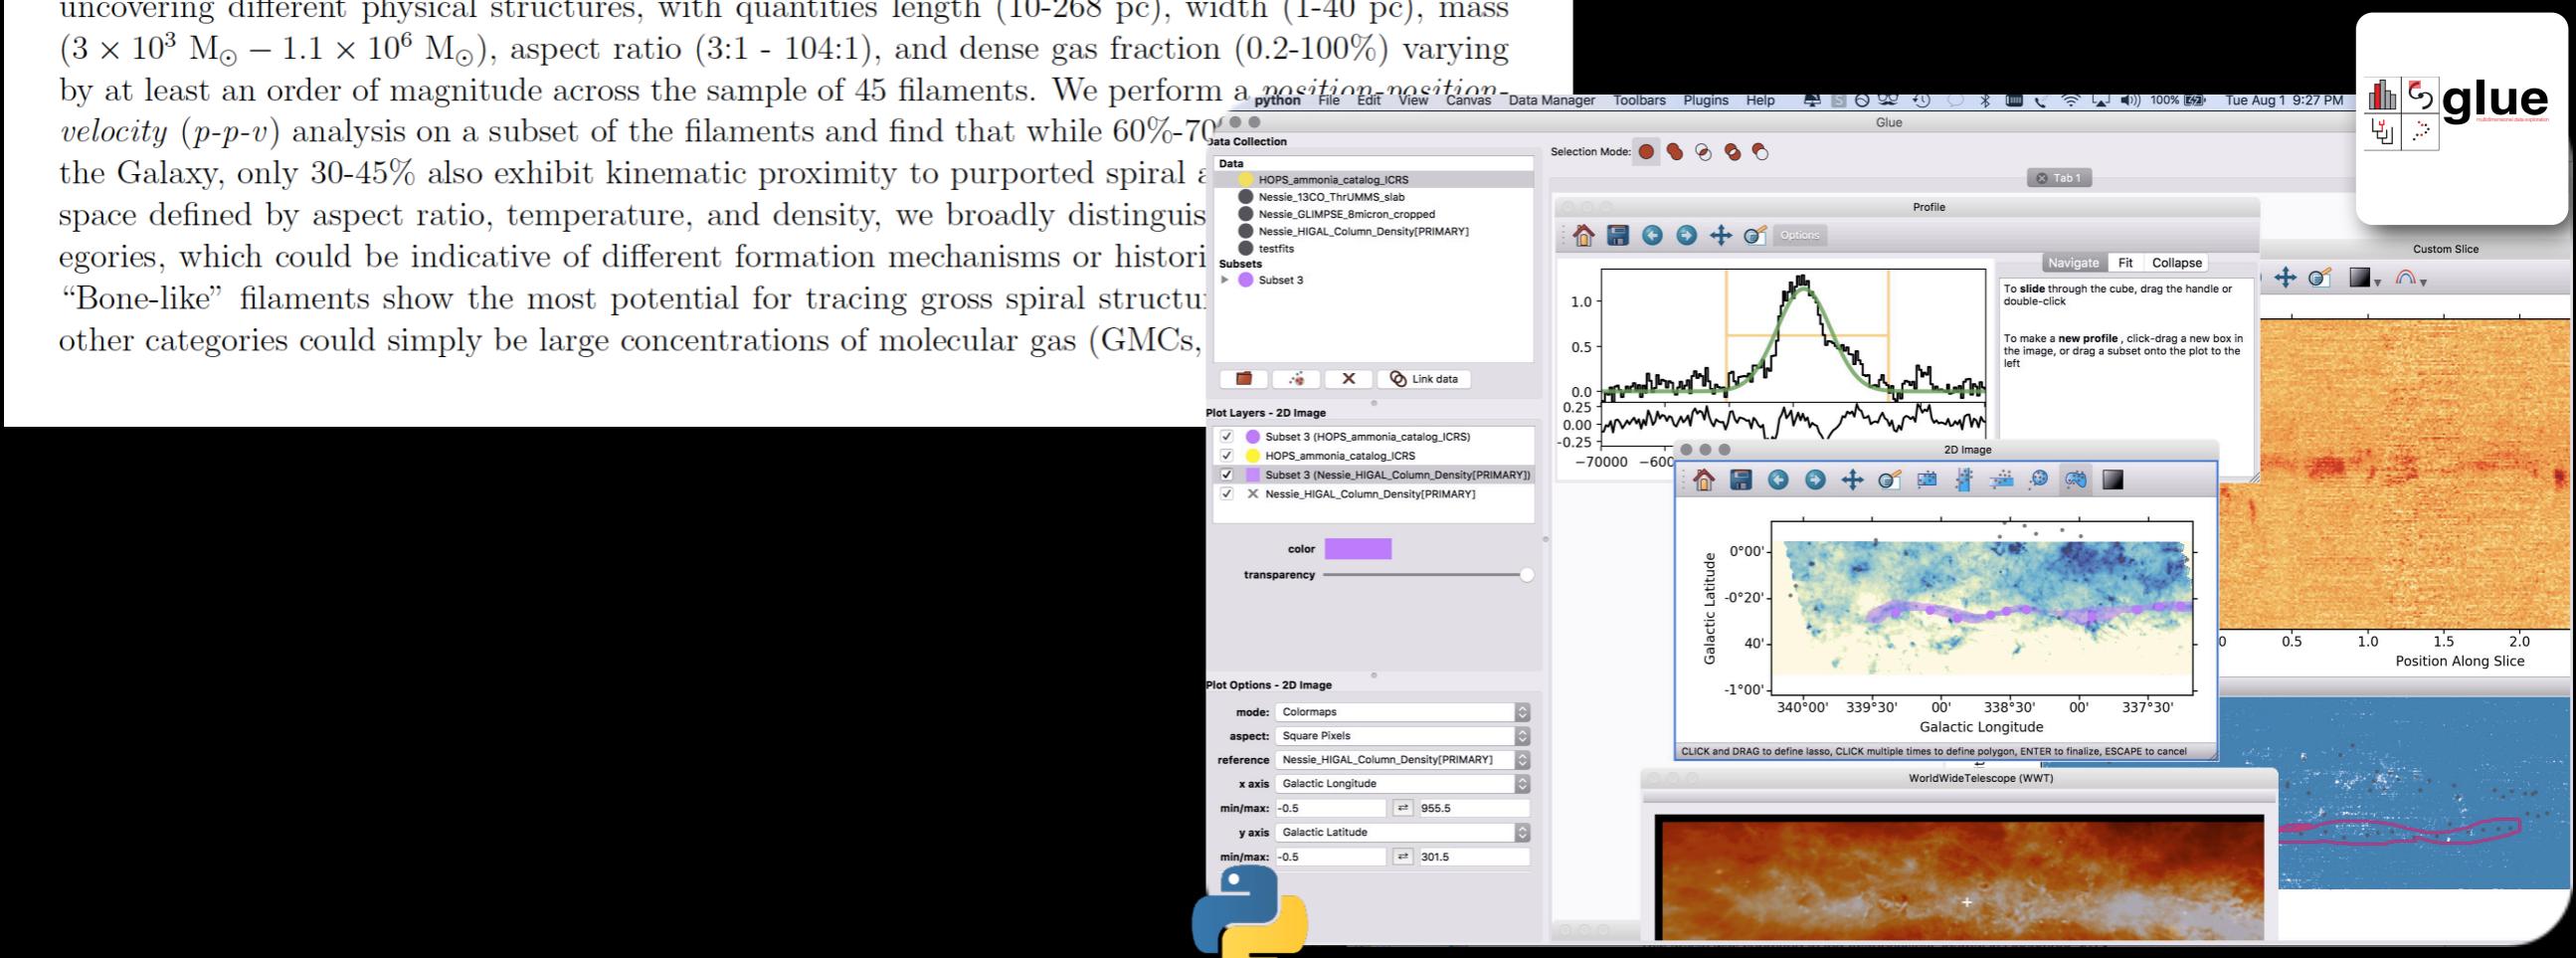

CATHERINE ZUCKER, CARA BATTERSBY, ALYSSA GOODMAN¹

¹Harvard-Smithsonian Center for Astrophysics

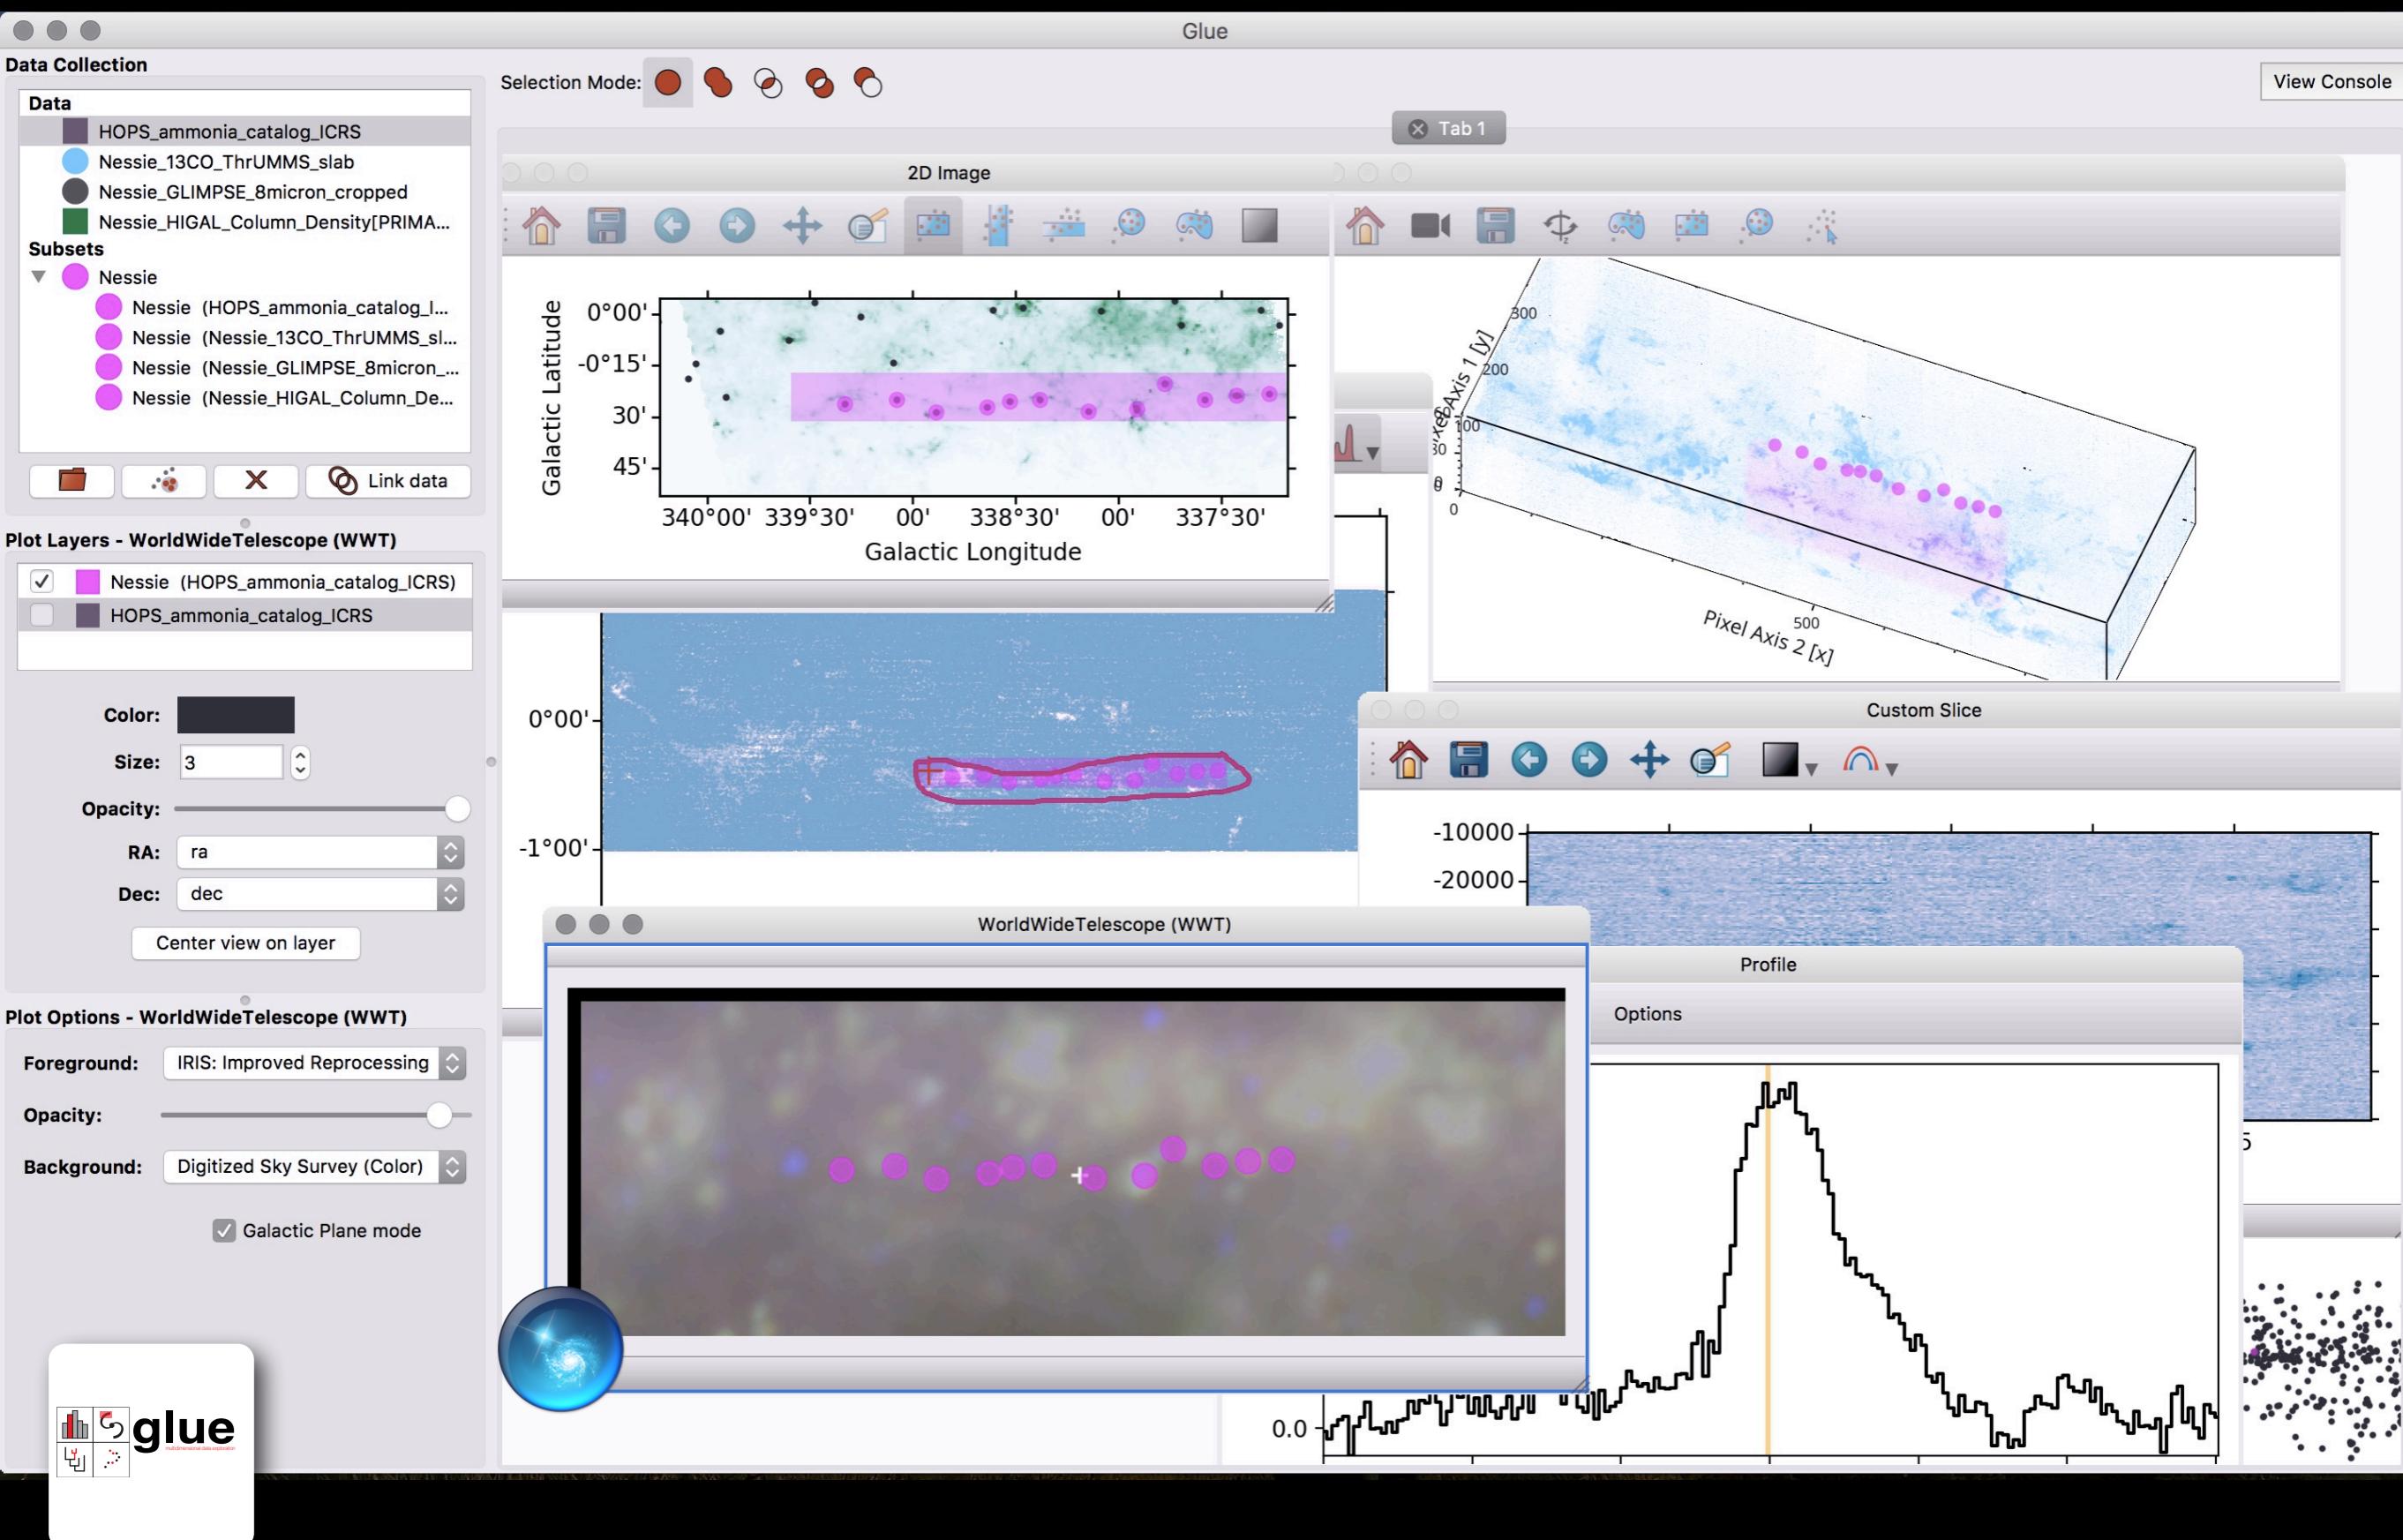

Abstract

The characterization of our Galaxy's longest filamentary gas features has been the subject of a number of studies in recent years, producing not only a sizeable sample of large-scale filaments, but also confusion as to whether all these features (e.g. "Bones", "Giant Molecular Filaments") are essentially the same. They are not. We undertake the first standardized analysis of the physical properties (densities, temperatures, morphologies, radial profiles) and kinematics of large-scale filaments in the literature. We expand and improve upon prior analyses by using the same data sets, techniques, and spiral arm models to disentangle the filaments' inherent properties from selection criteria and methodology. Our results suggest that the myriad filament finding techniques are uncovering different physical structures, with quantities length (10-268 pc), width (1-40 pc), mass ($3 \times 10^3 M_{\odot} - 1.1 \times 10^6 M_{\odot}$), aspect ratio (3:1 - 104:1), and dense gas fraction (0.2-100%) varying by at least an order of magnitude across the sample of 45 filaments. We perform a *position-position-velocity* (*p-p-v*) analysis on a subset of the filaments and find that while 60%-70% of the filaments in the Galaxy, only 30-45% also exhibit kinematic proximity to purported spiral arms. In space defined by aspect ratio, temperature, and density, we broadly distinguish three categories, which could be indicative of different formation mechanisms or histories. "Bone-like" filaments show the most potential for tracing gross spiral structure, while the other categories could simply be large concentrations of molecular gas (GMCs),

Building Custom Data Viewers

Glue's standard data viewers (scatter plots, images, histograms) are useful in a wide variety of data exploration settings. However, they represent a *tiny* fraction of the ways to view a particular dataset. For this reason, Glue provides a simple mechanism for creating custom visualizations using matplotlib.

Creating a `custom data viewer` requires writing a little bit of Matplotlib code but involves little to no GUI programming. The next several sections illustrate how to build a custom data viewer by

JUPYTER LABS

glue “on the web”

The screenshot shows the Jupyter Lab interface with several panels:

- File Menu:** File, Notebook, Editor, Terminal, Console, Help.
- Commands Panel:** Includes options like Clear Cells, Execute Cell, Interrupt Kernel, New Julia 0.4.5 console, New Python 2 console, New Python 3 console, New R console, and Switch Kernel.
- Console Tab:** Displays Python 3 (1) code and output. It includes a quickref section and a plot_beta_hist function that generates four histograms of beta values.
- Editor Tab:** Displays a script named mri_with_eeg.py with code for plotting MRI density and EEG data.
- Launcher Tab:** Displays the output of the mri_with_eeg.py script, showing an MRI scan, a histogram of MRI intensity, and four EEG traces labeled PG9, PG7, PG5, and PG3.
- File Operations Panel:** Includes Close All, Close Document, New Notebook, Revert Document, Save Document, and other file-related commands.
- Help Panel:** Includes links to various documentation resources like IPython Reference, JupyterLab Launcher, and Scipy Lecture Notes.
- Image Widget Panel:** Includes Reset Zoom, Zoom In, and Zoom Out options.
